

HYDRAULIC SQUAD (PTY) LTD

Lubricants and Lubrication Systems

Oils and greases to specification · Centralised grease systems · Supply, installation and service

www.hydraulicsquad.co.za

The right lubricant for the machine

We supply oils and greases for earthmoving, mining, plant and industrial equipment. Tell us the machine, or the specification in its manual, and we quote a lubricant that meets it.

PRODUCT	WHAT WE SUPPLY
Hydraulic oils	Mineral HM / HLP and HV / HVLP oils, zinc-free options and biodegradable HEES, in ISO VG 22 to 100
Engine oils	Heavy-duty diesel engine oils, typically SAE 10W-30, 10W-40, 15W-40 and 20W-50, to the API and OEM class your engine needs
Transmission oils	TO-4 transmission and drivetrain fluids, and ATF for power-shift and steering systems
Gear oils	Axle and differential oils (80W-90, 85W-90, 85W-140, limited-slip), and industrial EP and synthetic gear oils for gearboxes
Compressor oils	Mineral and synthetic oils for screw and piston compressors
Greases	Lithium, lithium-complex and calcium-sulphonate EP greases, NLGI 0 to 3, including moly greases for pins and bushes and grades for centralised systems

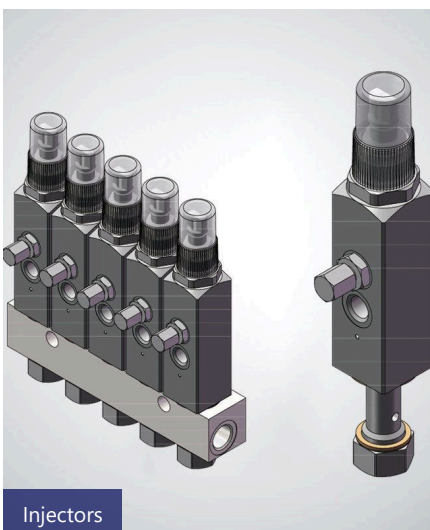

How we quote. Lubricants are sourced from established manufacturers to the specification or approval your machine requires. The brand, pack size and lead time are confirmed on the quotation. If you are not sure what your machine needs, send us the make, model and serial number and we will find out.

Automatic greasing for mining, plant and heavy machinery

A centralised system delivers the right amount of grease to every point while the machine works, instead of relying on someone with a grease gun. Fewer dry bearings and pins, less downtime, less wasted grease.

- Electric grease dosing pumps
- 180 kg drum pumps and bulk pump stations
- Multi-function and large-reservoir pump units
- Injectors and divider blocks
- Lube lines, hose and fittings
- Controllers and timers
- Complete systems, designed for your machine
- Installation on site

SERVICES

Installed, serviced and repaired by our team

INSTALLATION

We run the lines, fit the injectors and pump, set the cycle and test every point on site.

SERVICE AND REPAIR

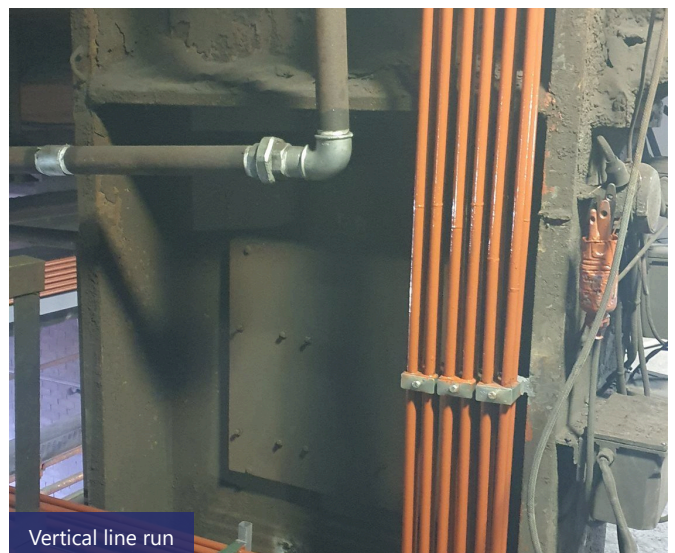

Pumps stripped, cleaned, repaired and tested in our workshop, and systems checked and reset on site.

PUMP REFURBISHMENT

Often a worn or contaminated lube pump can be rebuilt for less than a new one. We tell you which makes sense.

OIL CARE

Oil sampling, filtration and flushing of hydraulic systems, with samples analysed by an accredited laboratory.

ENQUIRIES

Ask us about your machines

Send the machine make and model, the lubricant specification, or a photo of the lube pump or its ID plate. We come back with a quotation, in writing.
